

National Survey of Rehabilitation Engineers and Assistive Technology Professionals on Working with Parents with Disabilities

What is the survey about?

We want to find out the practice patterns and needs around rehabilitation engineering and assistive technology services with parents and caregivers with physical and vision disabilities. This survey is part of a larger NIDILRR-funded Field Initiated Project at Through the Looking Glass.

Why should I take part?

Your participation will help us to:

- create online resources and other educational materials for professionals on ways they can support parents/caregivers with physical and/or vision disabilities
- expand our online resources and educational materials for parents/caregivers with physical or vision disabilities

How can I take the survey?

- Take the survey at

<https://redcap.link/TLGATandRESurvey>

Image description: A multiracial family of 4 with two adults sitting on front steps and two young children in front of them.

Who can take the survey?

We want to hear from rehabilitation engineers and assistive technology specialists who:

- have provided assessment or interventions services to adults with a physical or vision disability in the United States AND
- did not complete a similar survey designed for occupational therapists

** You do not need to have provided services to a parent or caregiver, or to have provided services focused on parenting to complete this survey.*

[Through the Looking Glass](#) (TLG) provides services and resources to support families with disabilities throughout the lifespan, as children, parents, and grandparents. Learn more about [Research at Through the Looking Glass](#).
